

Rugpull Defender vs. Everything Else (Short, Simple, and Sweet)

1. TokenSniffer

What they do:

Basic contract scan + outdated risk score.

What they miss:

- No real-time alerts
- No wallet monitoring
- No social feed
- No behavioral analysis
- No dev review system
- **Tons of false positives/negatives**

What sets Rugpull Defender apart:

- Real-time detection
- Behavioral + structural analysis
- Live alert feed
- Wallet monitoring
- Developer safety certification
- Clear, human-readable forensic reports

2. GoPlus Security

What they do:

Backend API used by wallets for basic contract checks.

What they miss:

- No trader-facing product
- No alerts
- No risk scoring explanation
- No wallet monitoring
- No feed
- No community layer

What sets Rugpull Defender apart:

- Built *for traders*, not developers
- Full risk breakdown
- Alerts, feed, monitoring
- Human-readable explanations
- Real-time rugpull behavior detection

3. DEXTools “Security Score”

What they do:

Surface-level contract checks.

What they miss:

- No explanation of risks
- No wallet monitoring
- No dev wallet tracking
- No honeypot behavior testing
- No alert system
- No forensic analysis

What sets Rugpull Defender apart:

- Deep forensic breakdown
- Real-time alerts
- Wallet + dev wallet monitoring
- Behavioral detection (not just static checks)

4. Honeypot.is

What they do:

Checks if you can sell a token.

What they miss:

- Everything else
- LP checks
- Mint authority
- Insider wallets
- Behavioral patterns
- Alerts
- Risk scoring

What sets Rugpull Defender apart:

- Full structural analysis
- Full behavioral analysis
- Alerts before the honeypot activates
- Wallet monitoring
- Developer review system

5. StaySafu

What they do:

Basic contract scanner.

What they miss:

- No real-time alerts
- No wallet monitoring
- No feed
- No behavioral analysis
- No dev review system

What sets Rugpull Defender apart:

- Real-time rugpull detection
- Wallet monitoring
- Live alert feed
- Behavioral + structural analysis
- Developer safety certification

THE TRUTH (The Sweet Part)

There is **NO** product on the market today that combines:

- Real-time rugpull behavior detection
- Structural + behavioral forensic analysis
- Wallet monitoring
- Dev wallet tracking
- Live alert feed
- Simple color-coded risk scoring
- Developer safety certification
- Human-readable forensic reports

Rugpull Defender is the first platform built for traders, not developers.

Everyone else gives you a static scan.

You give traders a **24/7 early-warning system**.

Everyone else shows you code.

You show traders **what the code *means***.

Everyone else reacts.

You **predict structural danger before it hits**.

One-Sentence Summary

Rugpull Defender is the only tool that combines real-time alerts, forensic analysis, wallet monitoring, and developer verification into a single trader-focused protection system.
